

User Registration - Other Profile Option

- When User Registration is configured on a Login Page you define a **Profile** and **Realm** the registered user will be assigned to.
- There might however be times that you want to assign the user to a different profile (for whatever reason).
- We have added this **hidden** feature and documented it here.

Create other profile

- Make sure you create the other profile and it has all the features you need (e.g. faster bandwidth)
- You can use the Profile name or Profile ID in the Login Page.

Tweak sConnect.js

- In our example we will reward users that register with a phone number that starts with **083** and has a total of 10 digits.
- Edit **/var/www/html/login/bootstrap5/js/sConnect.js**.
- Look for this part:

```
/*  
  
    //=== Proof of Concept Hack ===  
    //=== other_profile_name = 'Dev_Super_Register'  
    var other_profile_name = 'Dev_Super_Register';  
    //var other_profile_id = 56; //Alternative  
    var phone    = $("#txtrCell").val();  
    if(/^072/.test(phone)){  
        formData['other_profile_name'] = other_profile_name;  
        //formData['other_profile_id']   = other_profile_id;  
    }  
    //=== END Proof of Concept Hack ===  
*/
```

- Now for our requirement we change it to the following:

```
//=== Proof of Concept Hack ===  
//=== other_profile_name = 'Dev_Super_Register'  
var other_profile_name = 'MTN-Profile';  
//var other_profile_id = 56; //Alternative  
var phone    = $("#txtrCell").val();  
if(/^083\d{7}$/.test(phone)){  
    formData['other_profile_name'] = other_profile_name;  
    //formData['other_profile_id']   = other_profile_id;  
}  
//=== END Proof of Concept Hack ===
```

- This means that if during registration a match on the phone number requirement is found, the user will be registered with the other profile.
- You can create your own criteria and simply tweak the **sConnect.js** file.

- This feature comes in handy if you want to give certain users special treatment based on the value of one of the supplied fields during user registration.
